

Max Grossman

7pod.tech, github.com/agrippa, max@7pod.tech, (914)-907-1518

EDUCATION

Rice University

Doctor of Philosophy in Computer Science January 2015-January 2017

Master of Science in Computer Science August 2012-May 2013

Bachelor of Science in Computer Science August 2008-May 2012

Research Advisor: Dr. Vivek Sarkar, Habanero Multicore Software Group

Thesis Title: Productive Programming Systems for Heterogeneous Supercomputers

Graduate Fellow to the Computing Research Association's Committee on Education

Rice Center for Engineering Leadership, Presentation Coach (2015-2017)

Rice Center for Teaching Excellence, Graduate Liaison (2015-2017)

2012-2013 Ken Kennedy Institute Oil & Gas HPC Fellowship

2009 Brown Undergraduate Research Internship

NCAA DI Track & Field (400m hurdles, 4x400m relay)

EXPERIENCE

7pod Technologies

Feb 2017-Present

Co-Founder and CEO

Direct the development of strategic partnerships and HPC software at a small, agile HPC software/hardware shop focused on serving full stack high-performance computing solutions. Emphasis on solutions in the energy, medical/healthcare, and analytics industries.

Children's Environmental Health Initiative

Sep 2017-Present

Research Scientist

Support the development of computational, analysis, and storage infrastructure for ongoing and future projects in the CEHI group. This includes the design of user experiences for data collection, the application of techniques for data cleaning/manipulation/formatting/visualization, the development of predictive/analytic algorithms, and the optimization of foundational software-hardware systems to support deeper and wider analysis of datasets.

Rice University Dept of Computer Science

Feb 2017-Present

Research Staff, Habanero Multicore Software Group

Representative to the OpenSHMEM Standards Committee

Work focuses on the development of high performance, high productivity programming models and runtimes through 1) tighter integration of computation and communication runtimes, and 2) transparent acceleration of managed runtime systems.

Rice University Dept of Computer Science Sept 2008-June 2013, Jan 2015-Feb 2017

Research Assistant, Habanero Multicore Software Group Advisor: Dr. Vivek Sarkar

Research projects concentrate on parallel programming models and tools for distributed, multi-core, and heterogeneous architectures. Additional work includes optimizing various large production applications in medical imaging, genomics, geophysics, astrophysics, and machine learning across a variety of hardware and software platforms. Developed the autograding infrastructure, project source code, project descriptions,

and quizzes for the Coursera specialization on “Parallel, Concurrent, and Distributed Programming in Java”.

NSF East Asia and Pacific Summer Institutes
Fellow

June 2016-August 2016
Mentor: Professor Hironori Kasahara

Led research into performance prediction techniques for heterogeneous architectures as a member of the Kasahara Laboratory at Waseda University in Tokyo, Japan. Drove continuing international collaborations between Waseda, Meisei, and Rice University HPC researchers.

Delphix
Member of Technical Staff

June 2013-January 2015

Work at Delphix includes 1) feature and performance improvements to the OpenZFS filesystem, 2) functionality improvements to a data replication feature in the core database virtualization product, 3) design and implementation of a challenge-response system for OS/shell-level security of the core product based on IETF RFC 6287, 4) unit test and integration test design and implementation for Java, Javascript, Python applications, and 5) launching and growing Delphix’s university recruiting program at Rice University.

Repsol USA
Research Intern

January 2011-December 2014
Managers: Mauricio Araya Polo & Gladys Gonzalez

Work focuses on optimizing geophysical applications. Initial development used heterogeneous processors as the primary avenue of performance improvement for a legacy geophysics application. Later work included intelligent scheduling algorithms, hardware adaptive algorithms, and heterogeneous optimization.

Oracle Labs
Intern, VM Research Group

May 2012-August 2012
Manager: Misha Dmitriev

Investigated the use of both static bytecode analysis and profiler metrics from parallel Java applications in accurately locating and diagnosing parallel bottlenecks. The results of that analysis was used to suggest code changes that are significantly beneficial for performance. Completed novel work on automatically manipulating Java bytecode based on the suggested changes.

NASA Jet Propulsion Laboratory
Intern, Space and Astrophysical Plasmas

June 2011-June 2012
Managers: Karen Willacy & Mark Allen

Used MPI to prepare a dynamical and chemical code base for more computationally demanding algorithms and larger data sets. Achieved scalable performance after applying code transformations to create an optimally parallel program. Responsible for advising and educating astrophysicists on the parallelization of their scientific models.

National Security Agency (NSA)
TS//SI Clearance with Polygraph and Psychological Exam.

May 2012-August 2012

Continued development of a large scale piece of software (>50,000,000 lines). Implemented new and useful functionality. Utilized C Programming, SVN Repository Management, modern wireless telecommunications protocols, Wiki Management, and the Linux command line.

BOOKS

J. Cheng, M. Grossman, T. McKercher. Professional CUDA C Programming. Wiley Publishing. 2014.

INVITED TALKS

Lecturer for the Accelerator Day at the Ken Kennedy Institute's HPC Bootcamp
<http://bootcamp.rice.edu/hpc-bootcamp> 2016, 2017

Secondary Session Leader for the SC BoF on Best Practices in Mentoring Undergraduate Research in Supercomputing 2016
